

Nombre de la práctica Amplify y Angular

Objetivo

Probar el desarrollo y despliegue de una Aplicación Web Angular junto con su BackEnd usando GraphQL

Instrucciones

Paso 1. Instalar [Amplify CLI](#)

```
npm install @aws-amplify/cli x + v
Microsoft Windows [Versión 10.0.22621.1848]
(c) Microsoft Corporation. Todos los derechos reservados.

C:\Users\lapto\OneDrive\Escritorio\UTNG\GDGS3091\Desarrollo web integral\U3\Amplify>npm install -g @aws-amplify/cli
[ ] - reify:axios: timing reifyNode:node_modules/@aws-amplify/cli Completed in 134ms
```

Paso 2. Agregar autenticación. Crear un nuevo usuario y verificar correo electrónico. Pega pantalla de evidencia

The screenshot shows a Windows terminal window with the following commands and output:

```
C:\WINDOWS\system32\cmd.exe
7 packages are looking for funding
  run 'npm fund' for details

C:\Users\lapto\OneDrive\Escritorio\UTNG\GDGS3091\Desarrollo web integral\U3\Amplify>
C:\Users\lapto\OneDrive\Escritorio\UTNG\GDGS3091\Desarrollo web integral\U3\Amplify>amplify configure
Follow these steps to set up access to your AWS account:

Sign in to your AWS administrator account:
https://console.aws.amazon.com/
Press Enter to continue

Specify the AWS Region
? region: us-east-1
Follow the instructions at
https://docs.amplify.aws/cli/start/install/#configure-the-amplify-cli

to complete the user creation in the AWS console
https://console.aws.amazon.com/iamv2/home#/users/create
Press Enter to continue

Enter the access key of the newly created user:
? accessKeyId: *****
? secretAccessKey: *****
This would update/create the AWS Profile in your local machine
? Profile Name: Amplify-George

Successfully set up the new user.

C:\Users\lapto\OneDrive\Escritorio\UTNG\GDGS3091\Desarrollo web integral\U3\Amplify>
```

The background shows the AWS IAM console for the user 'Amplify-George'. The console displays the user's details, including the ARN, creation date, and access keys. The 'Credenciales de seguridad' tab is selected, showing the console login URL and the status of the console access and MFA.

Resumen		
ARN arn:aws:iam::908171440641:user/Amplify-George	Acceso a la consola Desactivada	Clave de acceso 1 AKIA5G4Z4OIAWHEVZE2F - Active Nunca usado. Creado hoy.
Creado June 20, 2023, 10:48 (UTC-06:00)	Último inicio de sesión en la consola -	Clave de acceso 2 No habilitado

Inicio de sesión en la consola	
Enlace de inicio de sesión en la consola https://908171440641.signin.aws.amazon.com/console	Contraseña de la consola No habilitado

Autenticación multifactor (MFA) (0)

Paso 3. Configurar el Amplify CLI y como nombre de usuario es: **amplify**-[primer letra de nombre y primer apellido]. Por ejemplo, **amplify-gbarron** Pega pantalla de evidencia

```
C:\Users\lapto\OneDrive\Escritorio\UTNG\GDGS3091\Desarrollo web integral\U3\Amplify>amplify configure
Follow these steps to set up access to your AWS account:

Sign in to your AWS administrator account:
https://console.aws.amazon.com/
Press Enter to continue

Specify the AWS Region
? region: us-east-1
Follow the instructions at
https://docs.amplify.aws/cli/start/install/#configure-the-amplify-cli

to complete the user creation in the AWS console
https://console.aws.amazon.com/iamv2/home#/users/create
Press Enter to continue

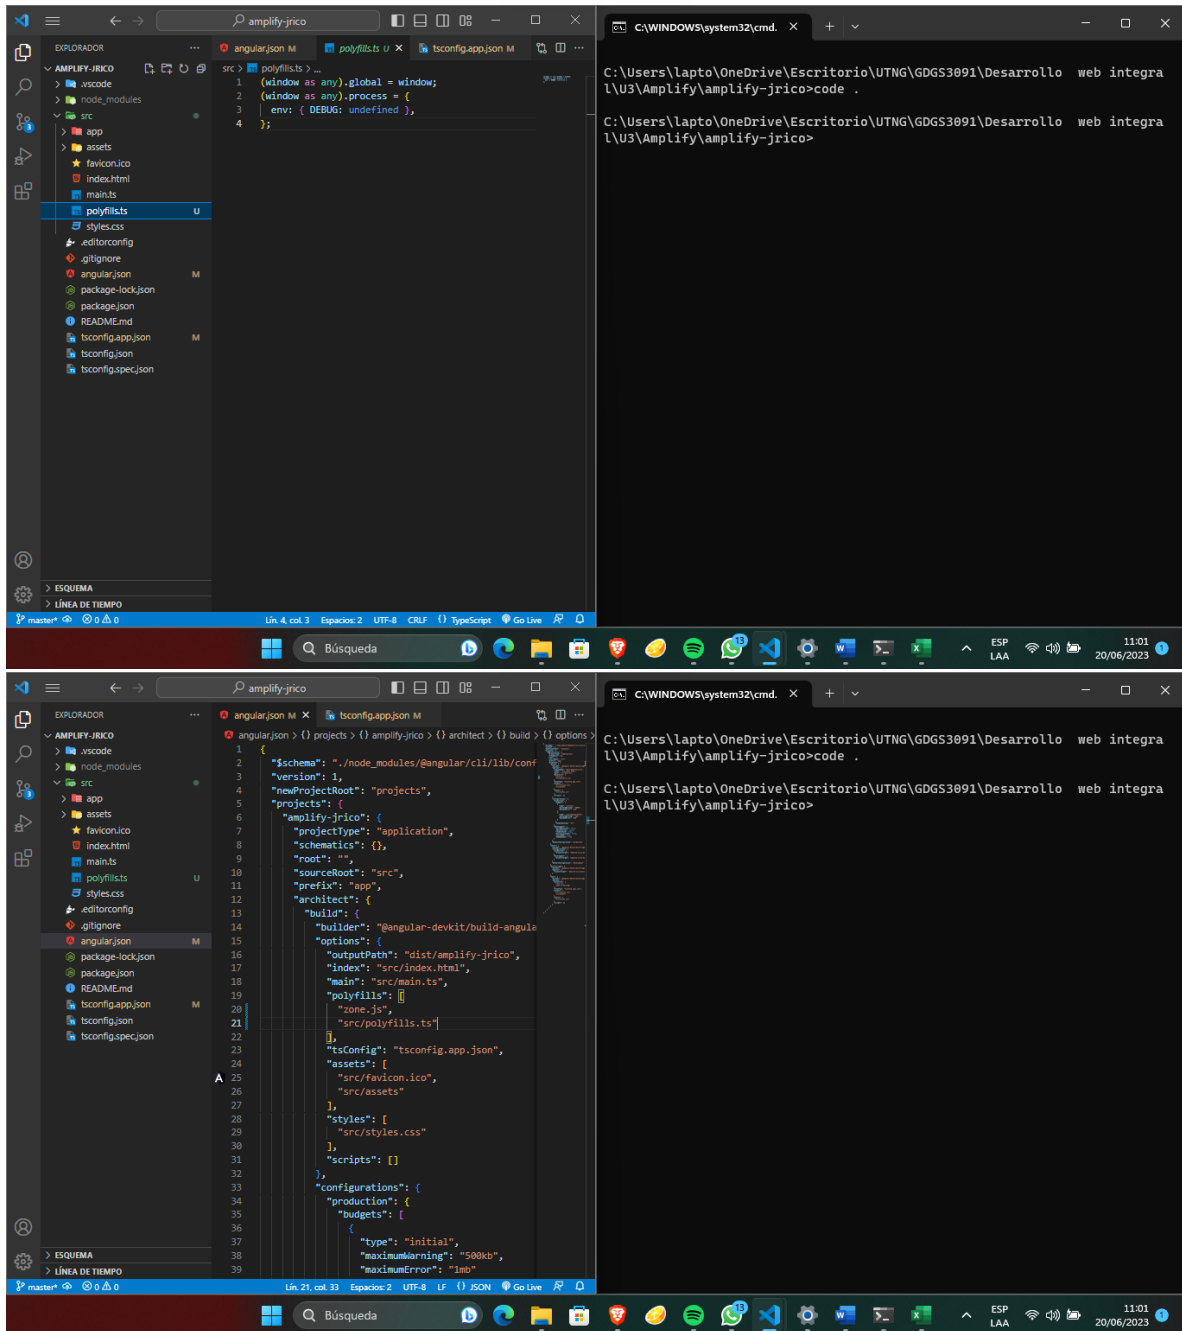

Enter the access key of the newly created user:
? accessKeyId: *****
? secretAccessKey: *****
This would update/create the AWS Profile in your local machine
? Profile Name: Amplify-George

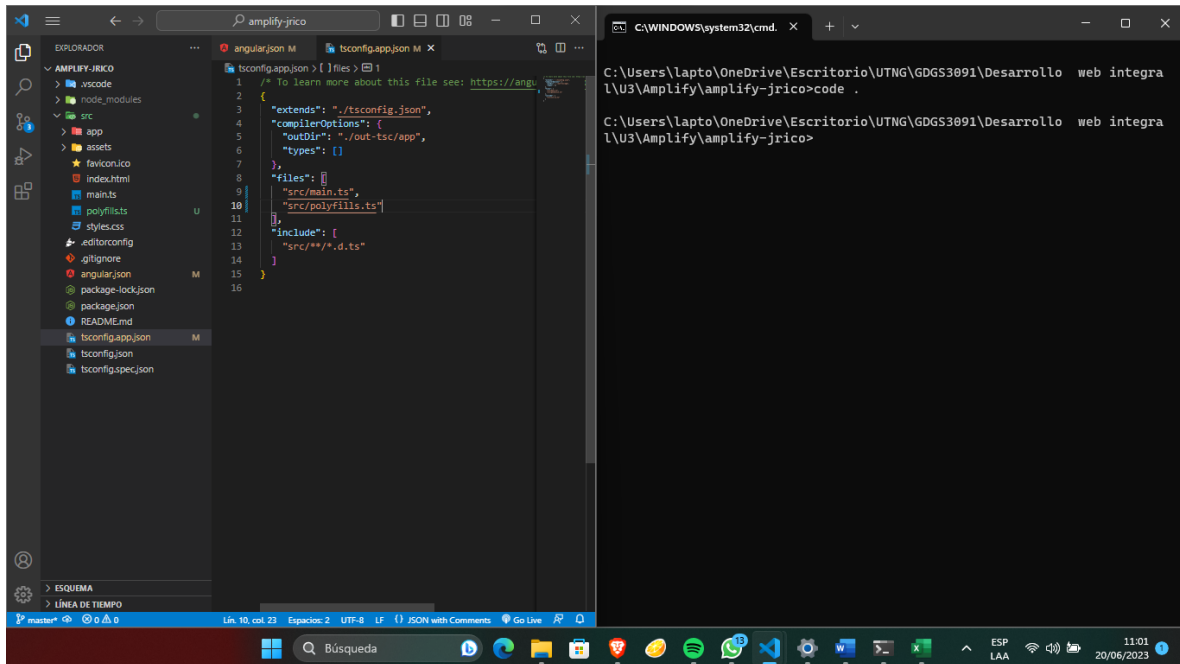

Successfully set up the new user.

C:\Users\lapto\OneDrive\Escritorio\UTNG\GDGS3091\Desarrollo web integral\U3\Amplify>
```

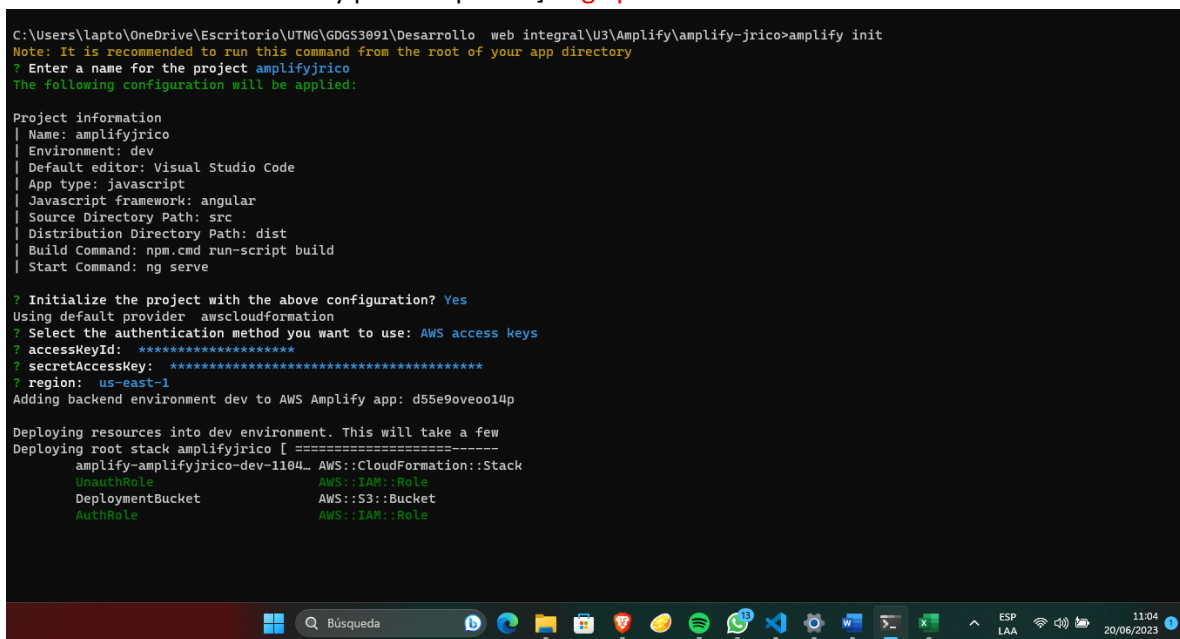

Paso 4. Crear un nuevo proyecto angular con el nombre: **amplify--**[primer letra de nombre y primer apellido]. Por ejemplo, **npm -p @angular/cli ng new amplify-gbarron** Pega pantalla de evidencia

```
C:\WINDOWS\system32\cmd. x + v
C:\Users\lapto\OneDrive\Escritorio\UTNG\GDGS3091\Desarrollo web integral\U3\Amplify>npm -p @angular/cli ng new amplify-jrico
? Would you like to add Angular routing? Yes
? Which stylesheet format would you like to use? CSS
CREATE amplify-jrico/angular.json (2735 bytes)
CREATE amplify-jrico/package.json (1044 bytes)
CREATE amplify-jrico/README.md (1066 bytes)
CREATE amplify-jrico/tsconfig.json (901 bytes)
CREATE amplify-jrico/.editorconfig (274 bytes)
CREATE amplify-jrico/.gitignore (548 bytes)
CREATE amplify-jrico/tsconfig.app.json (263 bytes)
CREATE amplify-jrico/tsconfig.spec.json (273 bytes)
CREATE amplify-jrico/.vscode/extensions.json (130 bytes)
CREATE amplify-jrico/.vscode/launch.json (470 bytes)
CREATE amplify-jrico/.vscode/tasks.json (938 bytes)
CREATE amplify-jrico/src/main.ts (214 bytes)
CREATE amplify-jrico/src/favicon.ico (948 bytes)
CREATE amplify-jrico/src/index.html (298 bytes)
CREATE amplify-jrico/src/styles.css (80 bytes)
CREATE amplify-jrico/src/app/app-routing.module.ts (245 bytes)
CREATE amplify-jrico/src/app/app.module.ts (393 bytes)
CREATE amplify-jrico/src/app/app.component.html (23115 bytes)

```

Paso 5. Crear un **Amplify Backend**, ingresar el nombre del proyecto: **amplify--**[primer letra de nombre y primer apellido] **Pega pantalla de evidencia**

```
C:\WINDOWS\system32\cmd. x + v

? Initialize the project with the above configuration? Yes
Using default provider awscloudformation
? Select the authentication method you want to use: AWS access keys
? accessKeyId: *****
? secretAccessKey: *****
? region: us-east-1
Adding backend environment dev to AWS Amplify app: d55e90veo014p

Deployment completed.
Deploying root stack amplifyjrico [ ===== ]
  amplify-amplifyjrico-dev-1104... AWS::CloudFormation::Stack
    UnauthRole          AWS::IAM::Role
    DeploymentBucket    AWS::S3::Bucket
    AuthRole            AWS::IAM::Role

? Help improve Amplify CLI by sharing non sensitive configurations on failures (y/N) · yes
Deployment state saved successfully.
? Initialized provider successfully.
✓ Initialized your environment successfully.

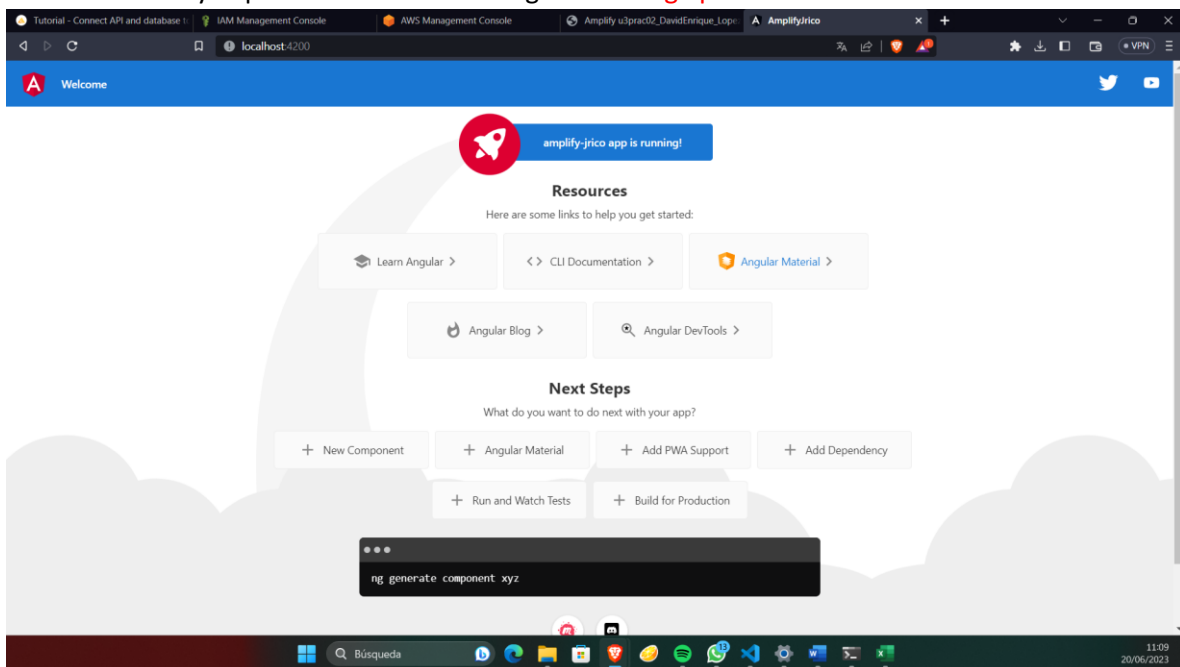

Your project has been successfully initialized and connected to the cloud!

Some next steps:
"amplify status" will show you what you've added already and if it's locally configured or deployed
"amplify add <category>" will allow you to add features like user login or a backend API
"amplify push" will build all your local backend resources and provision it in the cloud
"amplify console" to open the Amplify Console and view your project status
"amplify publish" will build all your local backend and frontend resources (if you have hosting category added) and provision it in the cloud

Pro tip:
Try "amplify add api" to create a backend API and then "amplify push" to deploy everything

C:\Users\lapto\OneDrive\Escritorio\UTNG\GDGS3091\Desarrollo web integral\U3\Amplify\amplify-jrico>
```

Paso 6. Conecta con la base de datos **GraphQL**, pegar pantalla donde insertes restaurantes y lo puedas ver en dos navegadores. **Pega pantalla de evidencia**

The image shows a Windows terminal window and a VS Code editor. The terminal window is titled "C:\WINDOWS\system32\cmd." and shows the following commands and output:

```
C:\Users\lapto\OneDrive\Escritorio\UTNG\GDGS3091\Desarrollo web integral\U3\Amplify\amplify-jrico>amplify add api
? Select from one of the below mentioned services: GraphQL
? Here is the GraphQL API that we will create. Select a setting to edit or continue Continue
? Choose a schema template: Single object with fields (e.g., "Todo" with ID, name, description)

▲ WARNING: your GraphQL API currently allows public create, read, update, and delete access to all models via an API Key. To configure PRODUCTION-READY authorization rules, review: https://docs.amplify.aws/cli/graphql/authorization-rules

✔ GraphQL schema compiled successfully.

Edit your schema at C:\Users\lapto\OneDrive\Escritorio\UTNG\GDGS3091\Desarrollo web integral\U3\Amplify\amplify-jrico\amplify\backend\api\amplifyjrico\schema.graphql or place .graphql files in a directory at C:\Users\lapto\OneDrive\Escritorio\UTNG\GDGS3091\Desarrollo web integral\U3\Amplify\amplify-jrico\amplify\backend\api\amplifyjrico\schema
/ Do you want to edit the schema now? (Y/n) · yes
Edit the file in your editor: C:\Users\lapto\OneDrive\Escritorio\UTNG\GDGS3091\Desarrollo web integral\U3\Amplify\amplify-jrico\amplify\backend\api\amplifyjrico\schema.graphql
✔ Successfully added resource amplifyjrico locally

✔ Some next steps:
"amplify push" will build all your local backend resources and provision it in the cloud
"amplify publish" will build all your local backend and frontend resources (if you have hosting category added) and provision it in the cloud

C:\Users\lapto\OneDrive\Escritorio\UTNG\GDGS3091\Desarrollo web integral\U3\Amplify\amplify-jrico>
```

The VS Code editor shows the file explorer on the left with the following structure:

- AMPLIFY-JRICO
 - angular
 - vscode
 - amplify
 - .config
 - current-cloud-backend
 - backend
 - api/amplifyjrico
 - build
 - resolvers
 - stacks
 - cf-inputs.json
 - parameters.json
 - schema.graphql
 - transform.conf.json
 - awscloudformation
 - types
 - amplify-meta.json
 - backend-config.json
 - tags.json
 - hooks
 - cli.json
 - README.md
 - team-provider-info.json
 - node_modules
 - src
 - app
 - app-routing.module.ts
 - app.component.css
 - app.component.html
 - app.component.spec.ts
 - app.component.ts
 - app.module.ts

The main editor shows the content of the `schema.graphql` file:

```
1 # This "input" configures a global authorization rule to enable public access to
2 # all models in this schema. Learn more about authorization rules here: https://docs.amplify.aws/cli/graphql/authorization-rules
3 input AMPLIFY ( globalAuthRule: AuthRule = { allow: public } ) # FOR TESTING ONLY!
4
5 type Todo @model {
6   id: ID!
7   name: String!
8   description: String
9 }
10
```

The status bar at the bottom of VS Code shows "master", "LÍNEA DE TIEMPO", "Lín. 10, col. 1", "Espacios: 2", "UTF-8", "LF", "Texto sin formato", and "Go Live".

```

C:\WINDOWS\system32\cmd. x + v

? Enter the file name pattern of graphql queries, mutations and subscriptions src/

GraphQL transformer version: 2

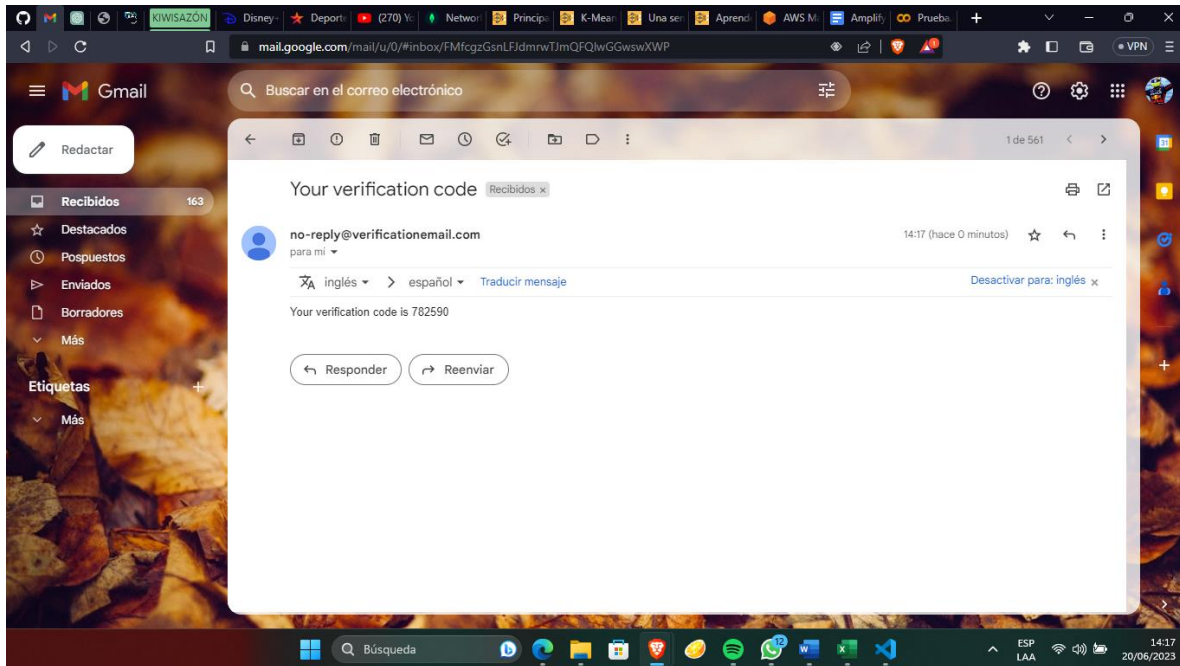

C:\Users\lapto\OneDrive\Escritorio\UTNG\GDGS3091\Desarrollo web integral\U3\Amplify\amplify-jrico>

```

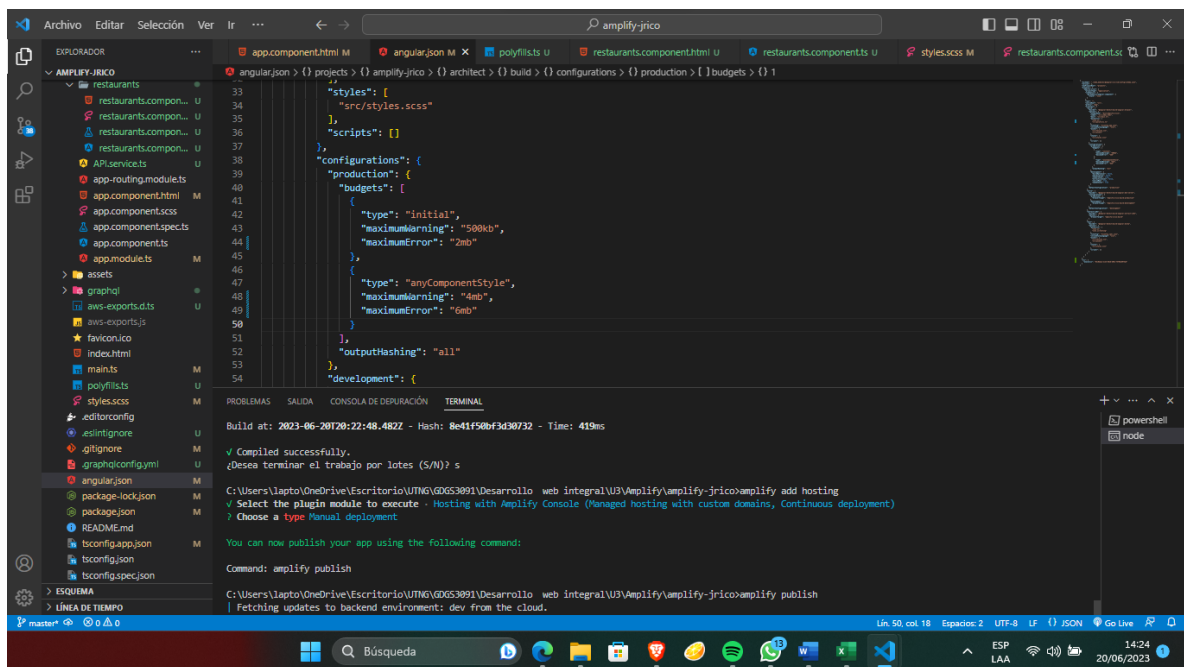

Paso 7. Despliega la aplicación y prueba con URL. Pega pantalla. **Pega pantalla de evidencia**

The image shows a terminal window with the following output:

```

plifyjrco\schema
✓ Successfully pulled backend environment dev from the cloud.

Current Environment: dev

```

Category	Resource name	Operation	Provider plugin
Hosting	amplifyhosting	Create	awscloudformation
Api	amplifyjrco	No Change	awscloudformation
Auth	amplifyjricocb5de5e8	No Change	awscloudformation

Are you sure you want to continue? (Y/n) »

The VS Code interface shows the file explorer with the project structure, the source code of the Angular application, and the terminal output of the AWS Amplify CLI commands. The terminal output includes the following details:

```

Deployment state saved successfully.
GraphQL transformer version: 2

```

The terminal also shows the output of the AWS CLI commands for creating the resources:

```

UserPoolClient
UserPoolClientWeb
UserPoolClientRole
UserPoolClientLambda
UserPoolClientLambdaPolicy
UserPoolClientLambdaPolicy
UserPoolClientInputs
IdentityPool
IdentityPoolRole

```

The output of the AWS CLI commands is as follows:

```

AWS::Cognito::UserPoolClient CREATE_COMPLETE
AWS::Cognito::UserPoolClientWeb CREATE_COMPLETE
AWS::IAM::Role CREATE_COMPLETE
AWS::Lambda::Function CREATE_COMPLETE
AWS::IAM::Policy CREATE_COMPLETE
AWS::IAM::Policy CREATE_COMPLETE
Custom::LambdaCallout CREATE_COMPLETE
AWS::Cognito::IdentityPool CREATE_COMPLETE
AWS::Cognito::IdentityPoolRole CREATE_COMPLETE

```

Paso 8. Responder a las siguientes preguntas

- Menciona las tecnologías que usaste y da una breve explicación sobre su uso.

ANGULAR: Framework front-end

Amplify: Framework back-end

- ¿Cómo pudieras implementarlo en proyecto que estás desarrollando?

Pues a lo mejor solo para host

- Agregar al menos otras dos [maneras](#) de autenticación como Facebook, Google.

INICIAR SESION CON GOOGLE

```
src > main.ts >
1 import { platformBrowserDynamic } from '@angular/platform-browser-dynamic';
2
3 import { AppModule } from './app/app.module';
4
5 import { Amplify } from 'aws-amplify';
6 import aws_exports from './aws-exports';
7 Amplify.configure(aws_exports);
8
9 platformBrowserDynamic().bootstrapModule(AppModule)
10   .catch(err => console.error(err));
11
```

PROBLEMAS SALIDA CONSOLA DE DEPURACIÓN TERMINAL

Please note that certain attributes may not be overwritten if you choose to use defaults settings.

You have configured resources that might depend on this Cognito resource. Updating this Cognito resource could have unintended side effects.

Using service: Cognito, provided by: awscloudformation

What do you want to do? Apply default configuration with Social Provider (Federation)

What domain name prefix do you want to use? amplifyjricod-15821e-dc15821e

Enter your redirect sign URL: http://localhost:4200/

Do you want to add another redirect sign URL No

Enter your redirect signout URL: http://localhost:4200/

Do you want to add another redirect signout URI No

Select the identity providers you want to configure for your user pool: Google

You've opted to allow users to authenticate via Google. If you haven't already, you'll need to go to <https://developers.google.com/identity> and create an App ID.

Enter your Google Web Client ID for your OAuth flow: 97808555743-fuic1ihs78cghbb91c1n1k6a2obbaa3.apps.googleusercontent.com

Enter your Google Web Client Secret for your OAuth flow: GOSFX-3oUjY-e75dRS80Xigb8S1lrhu2

Successfully updated auth resource amplifyjricod5de5e8 locally

```
src > main.ts >
1 import { platformBrowserDynamic } from '@angular/platform-browser-dynamic';
2
3 import { AppModule } from './app/app.module';
4
5 import { Amplify } from 'aws-amplify';
6 import aws_exports from './aws-exports';
7 Amplify.configure(aws_exports);
8
9 platformBrowserDynamic().bootstrapModule(AppModule)
10   .catch(err => console.error(err));
11
```
