

## Nombre de la práctica      Amplify y Angular

### Objetivo

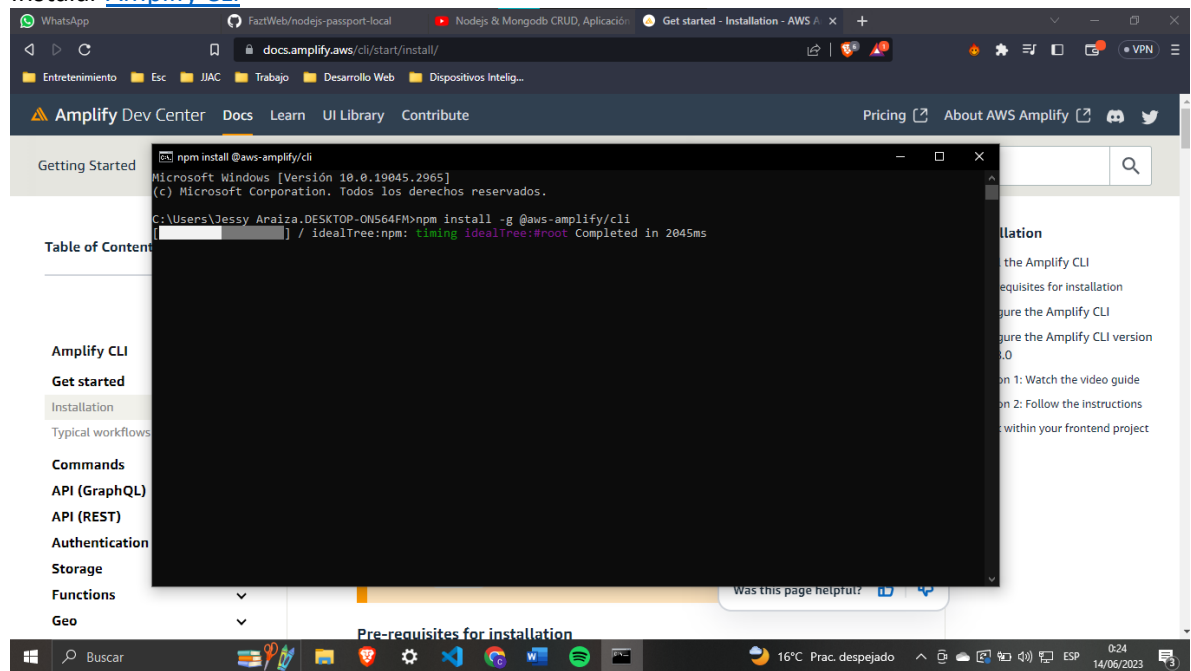

Probar el desarrollo y despliegue de una Aplicación Web Angular junto con su BackEnd usando GraphQL

### Instrucciones

1. Seguir el tutorial [Amplify Angular](#)

2. Crear archivo en formato PDF con **nombre u3prac02\_[nombre completo].pdf** donde vayas subiendo evidencia y depositarlo en repositorio [git](#) en carpeta u3pr01\_amplify
3. Instalar [Amplify CLI](#)

4. Agregar autenticación. Crear un nuevo usuario y verificar correo electrónico. **Pega pantalla de evidencia**

5. Configurar el Amplify CLI y como nombre de usuario es: **amplify-**[primer letra de nombre y primer apellido]. Por ejemplo, **amplify-gbarron** **Pega pantalla de evidencia**

The screenshot displays the AWS IAM console interface. The left sidebar shows the navigation menu with options like 'Administración del acceso', 'Usuarios', 'Roles', 'Políticas', and 'Informes de acceso'. The main content area shows the details for a user named 'amplify-jaraiza'. The 'Resumen' section displays the user's ARN, creation date, and access status. The 'Políticas de permisos' section shows the user has the 'AdministratorAccess-Amplify' policy attached. The 'Crear clave de acceso' section is active, showing the 'Recuperar claves de acceso' step. The 'Clave de acceso' section displays the secret access key 'AKIASVWZ7BQVBNLZVCOK' and the public key '\*\*\*\*\*'. The 'Prácticas recomendadas para la clave de acceso' section provides guidelines for managing access keys.

**Resumen**

Propiedad	Valor
ARN	arn:aws:iam::93982521434:user/amplify-jaraiza
Acceso a la consola	Desactivada
Clave de acceso 1	No habilitado
Clave de acceso 2	No habilitado
Último inicio de sesión en la consola	-
Creado	June 14, 2023, 00:53 (UTC-06:00)

**Políticas de permisos (1)**

Nombre de la política	Tipo	Adjuntado a través de
AdministratorAccess-Amplify	Administrada por AWS	Directamente

**Crear clave de acceso**

**Recuperar claves de acceso**

**Clave de acceso**

Si pierde o olvida la clave de acceso secreta, no podrá recuperarla. En su lugar, cree una nueva clave de acceso y deje inactiva la antigua.

Clave de acceso	Clave de acceso secreta
AKIASVWZ7BQVBNLZVCOK	***** <a href="#">Mostrar</a>

**Prácticas recomendadas para la clave de acceso**

- Nunca almacene la clave de acceso en texto plano, en un repositorio de código o en el código.
- Desactive o elimine la clave de acceso cuando ya no sea necesaria.
- Habilite los permisos con privilegios mínimos.
- Rote con regularidad las claves de acceso.

Para obtener más información sobre cómo administrar las claves de acceso, consulte [Prácticas recomendadas para administrar las claves de acceso de AWS](#).

[Descargar archivo.csv](#) [Listo](#)

```

C:\Users\Jessy Araiza.DESKTOP-ON564FM>amplify configure
Follow these steps to set up access to your AWS account:

Sign in to your AWS administrator account:
https://console.aws.amazon.com/
Press Enter to continue

Specify the AWS Region
? region: us-east-1
Follow the instructions at
https://docs.amplify.aws/cli/start/install/#configure-the-amplify-cli
to complete the user creation in the AWS console
https://console.aws.amazon.com/iamv2/home#/users/create
Press Enter to continue

Enter the access key of the newly created user:
? accessKeyId: *****
? secretAccessKey: *****
This would update/create the AWS Profile in your local machine
? Profile Name: amplify-jaraiza

Successfully set up the new user.
C:\Users\Jessy Araiza.DESKTOP-ON564FM>

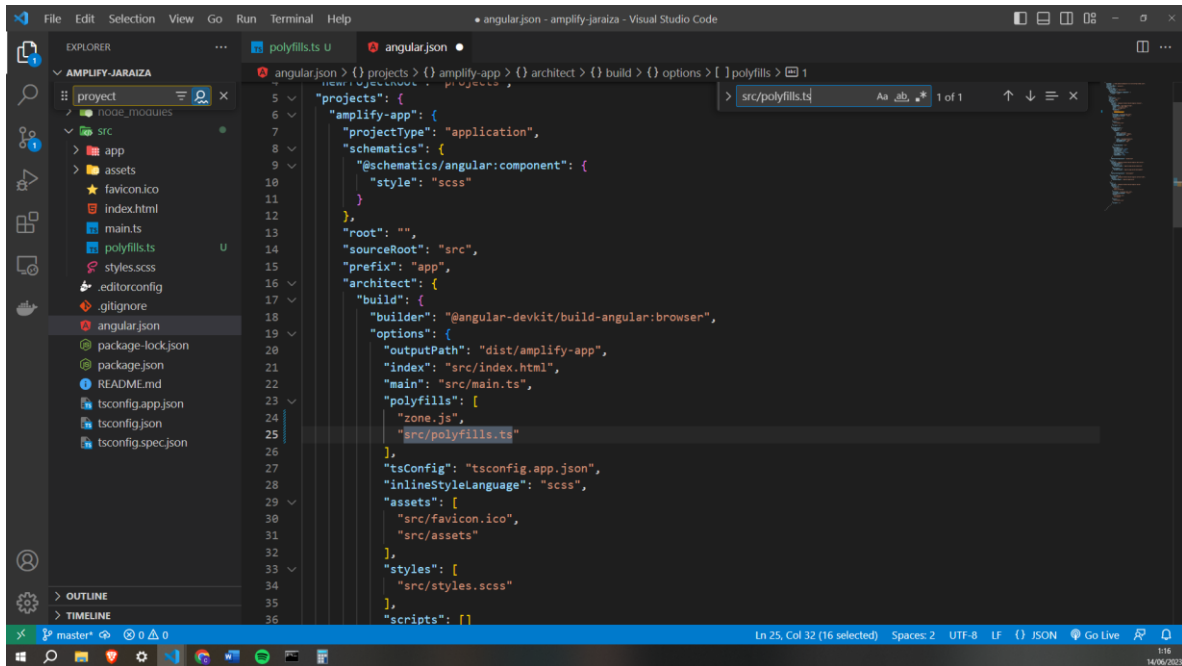

```

6. Crear un nuevo proyecto angular con el nombre: **amplify--**[primer letra de nombre y primer apellido]. Por ejemplo, **npx -p @angular/cli ng new amplify-gbarron** Pega pantalla de evidencia

```

Successfully initialized git.
D:\Jessy Araiza\Ingenieria\Cuatri 3\Desarrollo Web\Unidad 03>

```

7. Crear un **Amplify Backend**, ingresar el nombre del proyecto: **amplify--**[primer letra de nombre y primer apellido] **Pega pantalla de evidencia**

```
D:\Jessy Araiza\Ingenieria\Cuatri 3\Desarrollo Web\Unidad 03\amplify-jaraiza>amplify init
Note: It is recommended to run this command from the root of your app directory
? Enter a name for the project amplify--jaraiza
>> Project name should be between 3 and 20 characters and alphanumeric
```

```

D:\Jessy Araiza\Ingenieria\Cuatrì 3\Desarrollo Web\Unidad 03\amplify-jaraiza>amplify init
Note: It is recommended to run this command from the root of your app directory
? Enter a name for the project amplifyjaraiza
The following configuration will be applied:

Project information
| Name: amplifyjaraiza
| Environment: dev
| Default editor: Visual Studio Code
| App type: javascript
| Javascript framework: angular
| Source Directory Path: src
| Distribution Directory Path: dist
| Build Command: npm.cmd run-script build
| Start Command: ng serve

? Initialize the project with the above configuration? Yes
Using default provider awscloudformation
? Select the authentication method you want to use: AWS profile

For more information on AWS Profiles, see:
https://docs.aws.amazon.com/cli/latest/userguide/cli-configure-profiles.html

? Please choose the profile you want to use amplify-jaraiza
Adding backend environment dev to AWS Amplify app: dipizcdo5q800a

Deployment completed.
Deploying root stack amplifyjaraiza [ ===== ] 2/4
  amplify-amplifyjaraiza-dev-75.. AWS::CloudFormation::Stack CREATE_IN_PROGRESS Wed Jun 14 2023
  UnauthRole AWS::IAM::Role CREATE_COMPLETE Wed Jun 14 2023
  AuthRole AWS::IAM::Role CREATE_COMPLETE Wed Jun 14 2023
  DeploymentBucket AWS::S3::Bucket CREATE_IN_PROGRESS Wed Jun 14 2023

? Help improve Amplify CLI by sharing non sensitive configurations on failures (y/N) - yes
Deployment state saved successfully.
? Initialized provider successfully.
? Initialized your environment successfully.

Your project has been successfully initialized and connected to the cloud!

Some next steps:
"amplify status" will show you what you've added already and if it's locally configured or deployed
"amplify add <category>" will allow you to add features like user login or a backend API
"amplify push" will build all your local backend resources and provision it in the cloud
"amplify console" to open the Amplify Console and view your project status
"amplify publish" will build all your local backend and frontend resources (if you have hosting category added) and provision it in the cloud

Pro tip:
Try "amplify add api" to create a backend API and then "amplify push" to deploy everything

```

## 8. Conecta con la base de datos **GraphQL**, pegar pantalla donde insertes restaurantes y lo puedas ver en dos navegadores. **Pega pantalla de evidencia**

```

D:\Jessy Araiza\Ingenieria\Cuatrì 3\Desarrollo Web\Unidad 03\amplify-jaraiza>amplify add api
Select from one of the below mentioned services: GraphQL
Here is the GraphQL API that we will create. Select a setting to edit or continue Continue
Choose a schema template: Single object with fields (e.g., "Todo" with ID, name, description)

WARNING: your GraphQL API currently allows public create, read, update, and delete access to all models via an API Key. To configure PRODUCTION-READY authorization rules, review: https://docs.amplify.aws/cli/graphql/authorization-rules

GraphQL schema compiled successfully.

Edit your schema at D:\Jessy Araiza\Ingenieria\Cuatrì 3\Desarrollo Web\Unidad 03\amplify-jaraiza\amplify\backend\api\amplifyjaraizaschema.graphql or place .graphql files in a directory at D:\Jessy Araiza\Ingenieria\Cuatrì 3\Desarrollo Web\Unidad 03\amplify-jaraiza\amplify\backend\api\amplifyjaraizaschema
Do you want to edit the schema now? (Y/n) - yes
Edit the file in your editor: D:\Jessy Araiza\Ingenieria\Cuatrì 3\Desarrollo Web\Unidad 03\amplify-jaraiza\amplify\backend\api\amplifyjaraizaschema.graphql
? Successfully added resource amplifyjaraiza locally

Some next steps:
"amplify push" will build all your local backend resources and provision it in the cloud
"amplify publish" will build all your local backend and frontend resources (if you have hosting category added) and provision it in the cloud

**10.** Responder a las siguientes preguntas

1. Menciona las tecnologías que usaste y da una breve explicación sobre su uso.
  - Angular: Es un framework de desarrollo de aplicaciones web basado en TypeScript. En el tutorial, se utiliza Angular para desarrollar la aplicación web.
  - AWS Amplify: Es un conjunto de herramientas y servicios proporcionados por Amazon Web Services (AWS) que facilita la creación de aplicaciones web y móviles escalables y seguras. Amplify se utiliza en el tutorial para agregar funcionalidades de backend y hosting a la aplicación Angular.
  - AWS CLI: La interfaz de línea de comandos de AWS (AWS CLI) se utiliza para interactuar con los servicios de AWS desde la línea de comandos. En el tutorial, se utiliza para configurar y desplegar la aplicación utilizando Amplify.
  - Git: Es un sistema de control de versiones ampliamente utilizado. En el tutorial, se utiliza Git para clonar el proyecto de muestra y para realizar el seguimiento de los cambios en el código fuente de la aplicación.
2. ¿Cómo pudieras implementarlo en proyecto que estás desarrollando?
  - Puedes utilizarlo, ya que es una manera excelente para publicarlo y brindarse seguridad a tus aplicaciones, el lado malo o que te puede perjudicar es el costo, un tanto elevado que tiene.
3. Agregar al menos otras dos [maneras](#) de autenticación como Facebook, Google.

```
C:\WINDOWS\system32\cmd.exe
Successfully updated resource update locally

Some next steps:
"amplify push" will build all your local backend resources and provision it in the cloud.
"amplify publish" will build all your local backend and frontend resources (if you have hosting category added) and provision it in the cloud.
